

MODULE: 6 ASSIGNMENT

Question:1

What are events in Google analytics?

Answer :

In **Google Analytics 4 (GA4)**, an **event** is any meaningful action or occurrence that takes place on your website or mobile app that you want to track.

Here's a breakdown of what it means, why it matters, and how to use events effectively.

What is an Event

GA4 defines an event as:

“A specific interaction or occurrence on your website or app — for example, when someone loads a page, clicks a link, or completes a purchase.”

In GA4, **almost everything is tracked as an event** — page views, button clicks, form submissions, scrolls, file downloads, etc.

This is a major improvement from **Universal Analytics**, where only certain actions were considered “events.”

Each event can also include **parameters**, which are extra pieces of information (key-value pairs) that add context.

For example:

- Button clicked → `button_name: "Buy Now"`
- Product purchased → `product_id: 12345, price: 499`

Types of Events in GA4

Type	Definition
Automatically Collected Events	Tracked by GA4 by default when your web/app stream is set up. Example: <code>first_visit</code> , <code>session_start</code> .
Enhanced Measurement Events	Automatically tracked with one toggle — includes scrolls, outbound link clicks, file downloads, and video engagement. Requires minimal setup.
Recommended Events	Events suggested by Google (e.g., <code>purchase</code> , <code>sign_up</code>) that follow naming conventions and make reports more meaningful.
Custom Events	Events you define for specific business actions, e.g., <code>pdf_download</code> , <code>signup_popup_opened</code> .

How to Implement & Track Events

You can implement events using the gtag code:

```
gtag('event', '<event_name>', {  
  <parameter1>: 'value1',  
  <parameter2>: 'value2'  
});
```

You can view and test events in:

- **Realtime reports**
- **DebugView**
- **Events section** in GA4

Best Practices:

- Use **recommended names** whenever possible.
- Be **consistent** with naming and parameters.
- Add **meaningful parameters** to get deeper insights.

Why Events Matter

Events help you understand **user behavior** at a deeper level — not just who visited, but what they *did*:

- What they clicked, scrolled, watched, or downloaded.
- Which actions lead to **sales, sign-ups, or conversions**.

They also allow you to:

- Segment users by actions.
- Measure campaign effectiveness.
- Optimize your website or app experience.

Special Concept: Key Events (Conversions)

A **Key Event** (previously called a “Conversion”) is an important event that reflects your business success, such as:

- `purchase_complete`
- `lead_form_submitted`

Once marked as **key**, GA4 tracks special metrics like:

- **Session Key Event Rate**
- **User Key Event Rate**

✓ Tip: Only mark meaningful actions (e.g., purchase, form submission) as key events — not generic ones like “page_view.”

Example Scenarios

Event Name	Trigger	Parameters Example
video_play	When a user clicks play on a video	{ video_title: "How To Setup GA4", video_length: 300 }
file_download	When a user downloads a whitepaper	{ file_name: "SEO_Guide.pdf", file_size_kb: 1024 }
lead_form_submitted	When a user fills a contact form	Marked as Key Event for lead generation

Question: 6

Create a Goal for Your Business and Study Reports Whether It Has Been Completed or Not

Answer:

Here’s how to set a clear business goal and measure whether it’s been achieved using Google Analytics reports.

1. Set the Goal (Use SMART Framework)

Example Goal:

“Increase monthly sales revenue by 15% by the end of Q2 (June 30, 2025) by launching two new product bundles and running a promotional campaign aimed at existing customers.”

Breakdown:

- **Specific:** Increase monthly revenue by 15% through new bundles + promotion.
- **Measurable:** 15% growth in monthly sales.
- **Achievable:** Based on past trends and capacity.
- **Relevant:** Aligns with overall growth strategy.
- **Time-bound:** To be achieved by **June 30, 2025**

2. Create a Goal Report

Section	Content
Goal Statement	Restate your SMART goal clearly.
Baseline Metrics	Record existing performance (e.g., April 2025: ₹100 lakhs in sales).
Actions Taken	Example: Launched Bundle A & B (May 1); ran promo (May 5–31) via email and social media.

Metrics During Period	May: ₹112 lakhs (↑12%), June: ₹114 lakhs (↑14%)
Analysis	Compare results with target. Identify reasons for success or shortfall.
Conclusion	Goal partially met — 14% vs. target 15%. Consider extending the campaign or refining strategies.

3. Example Outcome

- **Baseline (April 2025):** ₹100 lakhs
- **May Revenue:** ₹112 lakhs (12% increase)
- **June Revenue:** ₹114 lakhs (14% increase)

Result:

Goal *nearly* achieved (14% vs. 15% target)

Next Steps:

- Extend promo for another month.
- Refine messaging and target audience.
- Focus more on existing loyal customers.

✅ Final Summary:

- Events in GA4 help track every user action on your site or app.
- Goals let you measure progress toward business objectives.
- Together, they help you understand performance, optimize campaigns, and make data-driven decisions.
